

PRODUCT REQUIREMENTS DOCUMENT

YBB ABB Learning & Certification Platform

Standalone MVP for the Authorised Business Broker Certification Programme

Document	Details
Owner	Yoova Business Broking (YBB)
Version	1.0
Audience	Product Manager, UI/UX Designer, Development Team, QA Team
Build objective	Launch a separate YBB-branded paid learning and certification system
Commercial product	ABB Certification Programme – ₹15,000 + GST
Status	Requirements for estimation and development

Critical boundary: This MVP belongs only to Yoova Business Broking. It must use YBB branding, YBB payment collection, YBB invoices, YBB learner data and YBB administration. It must not use or depend on Gyanschool or CapOasis accounts.

1. Product objective

Build a simple, secure and mobile-responsive web platform through which a learner can purchase the ABB Certification Programme, complete 50+ video lessons, use the workbook, submit assignments, take the final examination and receive a verifiable ABB Certificate and unique ABB ID.

The first release must be commercially usable. A customer should be able to move from payment to certification without manual technical intervention, except where YBB intentionally reviews assignments or approves certification.

2. Business rules that must not change

1. ABB Certification is a YBB-issued professional certification. It is not a government licence, statutory accreditation or guaranteed right to practise a regulated profession.
2. The ABB course fee is ₹15,000 + GST. Pricing and tax values must remain editable by Super Admin.
3. ABB Certification and YBB Authorised Partner status are separate products.
4. An ABB learner must not automatically receive Partner Network, deal-listing or marketplace rights.
5. All payments, invoices and learner records must belong to Yoova Business Broking.
6. The platform must allow YBB to change lessons, rules, examination settings and certificate formats without code changes wherever practical.

3. MVP scope

Included in this build

7. Public ABB programme page and learner registration.
8. YBB payment collection and enrolment.
9. Learner dashboard and profile.
10. Module/lesson-based video course.
11. Workbook, templates and downloadable resources.
12. Progress tracking and lesson sequencing.
13. Assignments and final project submission.
14. Final examination and reattempt rules.
15. Code of Conduct and legal acceptance.
16. ABB Certificate, unique ABB ID and verification page.
17. Admin dashboard, support and basic reporting.

Explicitly outside this build

18. YBB Authorised Partner onboarding or renewal.
19. Professional Partner profiles or directory.
20. Business opportunities, acquisition mandates or investor listings.
21. Buyer–seller matching, deal collaboration or commission tracking.
22. Social feed, internal messaging or community forum.
23. Native Android or iOS application.
24. AI recommendations or advanced analytics.

4. User roles

Role	What the role can do
Visitor	View course information, register, pay and log in.
Learner	Access course, resources, assignments, examination, results and certificate.
Reviewer	Review assignments/final projects, add feedback and approve or reject submissions.
Support Admin	View learners, assist with access, respond to tickets and resend communications.
Content Admin	Create modules, lessons, resources, assignments and examination questions.
Super Admin	Full access, including payments, settings, certification, users, reports and audit history.

5. End-to-end learner journey

25. Visitor opens the ABB programme page.

26. Visitor creates an account and enters billing details.
27. Visitor accepts purchase terms and completes payment to YBB.
28. System creates the learner account, enrolls the learner and sends login details.
29. Learner completes profile and confirms the certificate name.
30. Learner watches lessons, downloads resources and completes required activities.
31. Learner submits compulsory assignments and final project, if enabled.
32. Learner becomes eligible for the final examination.
33. Learner passes the assessment or follows the configured reattempt process.
34. Learner accepts the ABB Code of Conduct and final declaration.
35. YBB approves certification automatically or manually, based on admin setting.
36. System generates the ABB Certificate and unique ABB ID.
37. Learner downloads the certificate; third parties can verify it through the public verification page.

6. Functional requirements – 10 modules

6.1. Registration and learner profile

Create a verified learner record and capture all information required for course access, communication, billing and certification.

Student flow

38. Learner registers using mobile number and email address.
39. Learner verifies email/mobile using OTP or verification link.
40. Learner completes profile and confirms the exact certificate name.

System requirements

41. Mandatory fields: full name, mobile, email, city, state, profession and billing address.
42. Optional/configurable fields: photograph, education, organisation, identity proof and GST details.
43. Email and mobile number must be unique.
44. Learner can edit profile, but certificate name changes after examination require admin approval.
45. Password reset and account recovery must be available.

Admin controls

46. Make profile fields mandatory/optional.
47. View and edit learner profile.

- 48. Deactivate/reactivate account.
- 49. Reset access and record the action in the audit log.

Acceptance criteria

- 50. ☐ Duplicate email/mobile accounts are prevented.
- 51. ☐ Learner can log in and recover access.
- 52. ☐ Certificate name is clearly confirmed before examination.

6.2. Payment, invoice and enrolment

Collect the ABB fee directly for YBB and provide automatic access after successful payment.

Student flow

- 53. Learner selects ABB Certification Programme.
- 54. Learner enters billing/GST details and accepts purchase terms.
- 55. Learner pays through the YBB payment gateway.
- 56. System confirms payment, generates receipt/invoice and enrolls learner.

System requirements

- 57. Price, GST rate, discount code and access duration must be configurable.
- 58. Successful payment must create an order, payment record and course enrolment.
- 59. Failed, pending, refunded and cancelled states must be stored.
- 60. Do not store complete card or banking credentials on YBB servers.
- 61. Invoice numbering and YBB legal details must be configurable.

Admin controls

- 62. View orders and payment status.
- 63. Resend invoice/receipt.
- 64. Create complimentary or manual enrolment with reason.
- 65. Record refund status without deleting the original transaction.

Acceptance criteria

- 66. ☐ Successful payment unlocks the course once only.
- 67. ☐ Failed payment does not grant access.
- 68. ☐ Invoice/receipt shows YBB details and GST breakup.
- 69. ☐ Payment events are visible to Admin.

6.3. Course, modules and video lessons

Deliver the 50+ ABB lessons in a structured, reliable and easy-to-use course player.

Student flow

- 70. Learner opens the dashboard and continues from the last incomplete lesson.
- 71. Learner watches the lesson, reads the summary and accesses lesson resources.
- 72. Lesson completion unlocks the next lesson where sequential mode is enabled.

System requirements

- 73. Hierarchy: Course → Module → Lesson.
- 74. Each lesson supports title, description, video, duration, transcript/summary and resources.
- 75. Video must stream securely; the UI must not expose a direct download button.
- 76. Lesson order and sequential/free-access mode must be configurable.
- 77. System must remember the last lesson and playback position.
- 78. A lesson may be marked complete automatically at a configurable watch percentage or manually, based on lesson settings.

Admin controls

- 79. Create, edit, reorder, publish/unpublish modules and lessons.
- 80. Replace a video without changing learner history.
- 81. Preview lessons as a learner.
- 82. Set release, prerequisite and completion rules.

Acceptance criteria

- 83. [] Course works on mobile and desktop.
- 84. [] Progress persists after logout.
- 85. [] Unpublished lessons are not visible.
- 86. [] Sequential rules cannot be bypassed through the URL.

6.4. Workbook, templates and resources

Provide the ABB Workbook and practical resources at course and lesson level.

Student flow

- 87. Learner opens the Resources area or a lesson resource section.
- 88. Learner previews or downloads permitted files.

- 89. Learner can see the latest version and file description.

System requirements

- 90. Support PDF, DOCX, XLSX, PPTX, image and approved link resources.
- 91. Resources can be course-wide, module-level or lesson-level.
- 92. Each resource stores title, description, version, date and download permission.
- 93. Admin can replace a resource while retaining the current learner-facing link.

Admin controls

- 94. Upload, replace, reorder and archive resources.
- 95. Enable/disable download.
- 96. View basic download counts.

Acceptance criteria

- 97. [] The complete Workbook is available from one clear location.
- 98. [] Lesson-specific resources appear in the correct lesson.
- 99. [] Archived files are not shown to learners.

6.5. Progress tracking and dashboard

Show each learner exactly what has been completed, what remains and what is required for certification.

Student flow

- 100. Learner opens dashboard.
- 101. Learner sees overall progress, module progress, pending assignments and examination eligibility.
- 102. Learner selects Continue Learning and returns to the correct lesson.

System requirements

- 103. Track lesson completion, module completion, assignment status, examination attempts and certificate status.
- 104. Show percentage completed and clear next action.
- 105. Examination eligibility must be calculated from configurable rules.
- 106. Admin overrides must require a reason and be logged.

Admin controls

- 107. View individual and cohort progress.
- 108. Filter learners by completion stage.

- 109. Export progress report.
- 110. Apply controlled progress override.

Acceptance criteria

- 111. [] Dashboard figures match actual records.
- 112. [] Continue Learning opens the correct lesson.
- 113. [] Eligibility changes automatically when requirements are met.

6.6. Assignments and final project

Collect, review and approve practical work required for professional certification.

Student flow

- 114. Learner reads instructions and downloads the assignment brief.
- 115. Learner uploads the response and receives confirmation.
- 116. Reviewer approves, requests resubmission or rejects with feedback.
- 117. Learner views feedback and resubmits where allowed.

System requirements

- 118. Each assignment supports instructions, due date, file types, maximum size, maximum attempts and compulsory/optional status.
- 119. Store every submission version with date and reviewer.
- 120. Statuses: Not Started, Submitted, Under Review, Approved, Resubmission Required, Rejected.
- 121. Final project must use the same workflow and may have separate approval authority.

Admin controls

- 122. Create and configure assignments.
- 123. Allocate or filter submissions for review.
- 124. Add feedback and change status.
- 125. Download submissions and export status report.

Acceptance criteria

- 126. [] Learner receives submission confirmation.
- 127. [] Reviewer feedback is visible to the correct learner only.
- 128. [] Compulsory unapproved work blocks examination/certification according to settings.

6.7. Final examination

Conduct a controlled assessment and calculate examination results consistently.

Student flow

- 129. Eligible learner reads instructions and starts the examination.
- 130. System presents questions and timer.
- 131. Learner submits or system auto-submits at timeout.
- 132. System displays the permitted result information and next step.

System requirements

- 133. Question bank supports MCQ, multiple-select and true/false at MVP.
- 134. Questions can be grouped by module/topic and difficulty.
- 135. Admin configures number of questions, randomisation, duration, pass percentage, attempts and waiting period.
- 136. Question order and answer order may be randomised.
- 137. Attempt record must store questions shown, answers, score, start/end time and result.
- 138. Do not reveal correct answers unless Admin enables it.

Admin controls

- 139. Create/import/edit/archive questions.
- 140. Configure examination rules.
- 141. View attempts and scores.
- 142. Approve a controlled reattempt or cancel an invalid attempt with reason.

Acceptance criteria

- 143. [] Only eligible learners can start.
- 144. [] Timer and auto-submit work correctly.
- 145. [] Score calculation is accurate.
- 146. [] Attempt limits cannot be bypassed.
- 147. [] Every result is auditable.

6.8. Certification and ABB ID

Issue a professional, traceable certificate only after all certification rules are satisfied.

Student flow

- 148. Qualified learner accepts the final declaration.
- 149. System or Admin approves certification.
- 150. System generates certificate and ABB ID.
- 151. Learner downloads certificate and shares the verification link/QR code.

System requirements

- 152. Default ID format: YBB-ABB-YYYY-NNNN; format must be configurable before launch.
- 153. Every ABB ID must be unique and never reused.
- 154. Certificate includes learner name, programme name, issue date, ABB ID, authorised signatory and QR/verification link.
- 155. Public verification page shows limited information only: name, ABB ID, issue date and status.
- 156. Certificate statuses: Active, Suspended, Revoked. Status changes require reason and audit record.
- 157. Certificate generation must be separate from YBB Authorised Partner identification.

Admin controls

- 158. Upload/manage certificate template and signatory.
- 159. Approve certification manually or enable automatic issuance.
- 160. Regenerate certificate after approved correction without changing ABB ID.
- 161. Suspend/revoke/reactivate with reason.

Acceptance criteria

- 162. [] Certificate cannot be generated for an ineligible learner.
- 163. [] QR/verification page resolves to the correct record.
- 164. [] Suspended/revoked status is visible on verification.
- 165. [] No two learners receive the same ABB ID.

6.9. Legal acceptance and Code of Conduct

Record informed acceptance of all commercial, certification, privacy and professional obligations.

Student flow

- 166. Learner accepts purchase terms before payment.
- 167. Learner accepts platform/privacy terms during registration.
- 168. Learner accepts ABB Code of Conduct and final declaration before certification.

System requirements

- 169. Each legal document must have a version number and effective date.
- 170. Store user ID, document version, date/time, IP address where legally appropriate, and acceptance action.
- 171. Updated mandatory terms may require re-acceptance.
- 172. Required disclaimers must state that ABB is YBB-issued, is not a statutory/government licence and does not guarantee income, transactions or employment.

Admin controls

- 173. Create/publish a new document version.
- 174. Mark acceptance as mandatory at registration, payment or certification stage.
- 175. Export acceptance evidence for a learner.

Acceptance criteria

- 176. [] Payment/certification is blocked until mandatory acceptance.
- 177. [] Acceptance record cannot be silently edited or deleted.
- 178. [] The exact accepted version can be retrieved.

6.10. Support, administration and reporting

Allow YBB to operate the platform without depending on the developer for daily tasks.

Student flow

- 179. Learner opens Help, selects category and submits a ticket.
- 180. Learner receives ticket number and can view responses/status.
- 181. Support Admin responds, resolves or escalates.

System requirements

- 182. Ticket fields: category, subject, description, attachment, priority, status, owner and timestamps.
- 183. Statuses: Open, In Progress, Waiting for Learner, Resolved, Closed.
- 184. Admin dashboard shows enrolments, revenue, active learners, completion, pending reviews, exam pass rate and certificates issued.
- 185. All sensitive admin actions must be logged.

Admin controls

- 186. Manage users, content, payments, assignments, exams, certificates, terms and tickets according to role.

- 187. Search by name, email, mobile, order, certificate or ABB ID.
- 188. Export CSV reports.
- 189. Configure standard email notifications.

Acceptance criteria

- 190. [] Daily operation does not require code changes.
- 191. [] Role permissions prevent unauthorised access.
- 192. [] Search and exports return accurate data.
- 193. [] Critical actions appear in the audit log.

7. Required screens

Area	Minimum screens
Public	ABB programme page; registration; login; forgot password; checkout; payment result; certificate verification.
Learner	Dashboard; profile; course player; resources; assignments; examination; results; certificate; legal documents; support tickets.
Reviewer	Submission queue; submission detail; feedback and decision history.
Admin	Dashboard; learners; orders/payments; course/content; resources; assignments; question bank; examination settings; certificates; legal versions; support; reports; system settings; audit log.

8. Core data records

Record	Minimum purpose
User	Login identity, role, contact details and status.
Learner Profile	Professional, billing and certificate information.
Course / Module / Lesson	Course hierarchy, content, order and rules.
Resource	Workbook, template or linked learning material.
Order / Payment / Invoice	Commercial transaction and GST record.
Enrolment	Learner-course access and validity.
Progress	Lesson/module completion and last activity.
Assignment / Submission	Instructions, uploaded work, feedback and approval.
Question / Exam / Attempt	Assessment configuration and complete attempt history.
Certificate / ABB ID	Certification record, document and public status.
Legal Document / Acceptance	Versioned terms and evidence of acceptance.
Support Ticket	Learner issue, communication and resolution.
Audit Log	Who changed what, when and why.

9. Integrations

- 194. YBB payment gateway and webhook for payment confirmation.
- 195. YBB email service for transactional messages.
- 196. SMS/OTP service if mobile verification is enabled.
- 197. Secure video hosting/streaming service.
- 198. File storage service with private access controls.
- 199. GST invoice/accounting integration if chosen; otherwise a configurable YBB invoice generator for MVP.
- 200. QR code and public certificate verification URL.

10. Non-functional requirements

Security

- 201. HTTPS on every page.
- 202. Passwords stored using a recognised one-way password hashing method.
- 203. Role-based access control for every admin/API action.
- 204. Private learner files and signed/authorised file access.
- 205. Server-side validation; protection against common web vulnerabilities and rate-limited login/OTP endpoints.
- 206. No storage of complete payment card/banking credentials.
- 207. Audit logs for payment, progress override, result changes, certification and legal acceptance.

Reliability and operations

- 208. Separate development/staging and production environments.
- 209. Automated database backups and tested restore procedure.
- 210. Error logging and uptime monitoring.
- 211. Payment webhooks must be idempotent so duplicate notifications do not create duplicate enrolments.
- 212. Content and database changes must follow a documented deployment and rollback process.

Usability and compatibility

- 213. Responsive design for mobile, tablet and desktop.
- 214. Support current versions of Chrome, Safari, Edge and Firefox.
- 215. Simple navigation with Continue Learning visible on the dashboard.
- 216. Readable text, keyboard-accessible controls and labelled form fields.
- 217. Reasonable loading performance on ordinary Indian mobile connections.

11. Suggested development order

Build block	Deliverable
Block 1 – Foundation	Project setup, database, roles, authentication, learner profile, staging environment.
Block 2 – Commerce	Programme page, checkout, payment, orders, GST invoice and automatic enrolment.
Block 3 – Learning	Course hierarchy, video player, resources, progression and learner dashboard.
Block 4 – Evaluation	Assignments, reviewer flow, question bank, examination and results.
Block 5 – Certification	Code of Conduct, certificate, ABB ID, QR/public verification.
Block 6 – Operations	Support, reports, audit logs, notifications, backups and security checks.
Block 7 – Launch QA	Complete payment-to-certificate testing, fixes, production deployment and monitoring.

12. Launch acceptance test

- 218. [] A new learner can register, pay YBB and receive course access.
- 219. [] Payment failure does not create unauthorised access.
- 220. [] Learner can complete lessons on mobile and desktop and progress is saved.
- 221. [] Learner can download the workbook/resources and submit compulsory work.
- 222. [] Reviewer can approve or request resubmission.
- 223. [] Only eligible learners can attempt the final examination.
- 224. [] Exam score, attempt limits and reattempt rules work correctly.
- 225. [] Only qualified learners receive a certificate and unique ABB ID.
- 226. [] Certificate QR/verification page returns the correct limited information.
- 227. [] All mandatory legal acceptances are stored with the correct version.
- 228. [] Admin can run daily operations and export essential reports without developer intervention.
- 229. [] Backup, restore, access-control and payment-webhook tests pass.

13. Decisions YBB must confirm before development is frozen

Decision	Recommended starting position
Course access duration	Make configurable; YBB to select the launch value.
Lesson completion rule	Sequential access; lesson complete at configured watch percentage.
Compulsory assignments	YBB to identify exact assignments and final project.
Examination format	Configurable MCQ-based exam for MVP; practical evaluation handled through assignments.
Pass percentage	Configurable; final business rule to be approved by YBB.
Number of attempts	Configurable; final value to be approved by YBB.
Certification approval	Manual approval for initial launch; automatic option can remain available later.
ABB ID format	YBB-ABB-YYYY-NNNN, subject to final approval.

Decision	Recommended starting position
Certificate validity	No expiry unless YBB formally introduces continuing certification requirements.
Domain/subdomain	Use a YBB-controlled domain; proposed learning subdomain to be confirmed.
Invoice workflow	YBB GST invoice generated automatically or integrated with YBB accounting system.

14. First action expected from the development team

At this stage, the developer is only expected to read and understand this document. Before discussing technology, timelines or development, the developer should return with:

- 230. Questions about any requirement that is unclear.
- 231. Requirements that can be interpreted in more than one way.
- 232. Missing information needed from YBB.
- 233. Dependencies or third-party services that require a decision.
- 234. Any technical concern that may materially affect the product.

The developer should not begin full development or prepare a final timeline at this stage. YBB will first answer the questions and freeze the requirements. Technology architecture, wireframes, estimates and delivery planning will be discussed in the next step.

Definition of success: YBB can accept a paid ABB enrolment and confidently deliver the complete learner journey—from registration and payment through learning, assessment and verifiable certification—without using any CapOasis or Gyanschool system.
